STEP 1
Place paper on top of compost and cover it lightly with more compost.

STEP 2
Place it in a warm and bright place.
It is important to keep the paper moist.

STEP 3
Seeds will germinate and you will have daisy flowers.

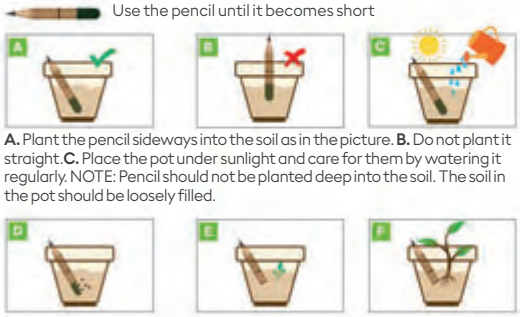
Use the pencil until it becomes short



A. Plant the pencil sideways into the soil as in the picture. **B.** Do not plant it straight. **C.** Place the pot under sunlight and care for them by watering it regularly. NOTE: Pencil should not be planted deep into the soil. The soil in the pot should be loosely filled.

D. The capsule gets dissolved and begins to expose. **E.** After 5-7 days, the seeds begin to germinate and form a sprout. **F.** After 10-12 days, the sprout grows into a plant.

explode®

New sustainable fabrics

OUR RESPONSIBILITY TOWARDS NATURE.

ORGANIC COTTON

This fabric is not genetically modified and is grown without the use of chemicals. Organic cotton is grown using organic farming systems that restore and maintain soil health and fertility and promote biologically diverse agriculture. These systems advocate banning the use of synthetic toxic pesticides and fertilizers, as well as genetically modified seeds. Compared to traditional cotton, 88% less water is used in growing organic cotton.

RECYCLED COTTON

Recycled cotton is defined as cotton fabric converted into cotton fibre that can be reused in textile products. The largest volume of recycled cotton sources is produced through pre-consumer waste, such as cutting scraps. The main benefit of these procedures is saving of energy amount, water and dye. Cotton recycling minimizes the environmental impact of clothes by reducing the amount of textile waste ending up in landfills.

RECYCLED POLYESTER

The fabric is created by transforming waste (PET bottles) into a usable product (polyester fabric) through eco-friendly procedures. Recycled polyester is of great importance in the modern textile industry, due to its zero-waste impact: about 5 used plastic bottles are removed from nature by producing one sweatshirt. Compared to the production of regular polyester, 58% less water is used in the production of recycled polyester, and CO2 emissions are reduced by 54%.

88%

less water is used in growing organic cotton, compared to traditional cotton growing

70%

of total garment production in the future has predicted to contain recycled cotton

54%

is CO2 reduction by recycling polyester, compared to regular polyester production
